A Passion for Pools & Hot Tubs

Premium Hot Tub Service £175

System Flush: A pipe degreaser is added to your hot tub for 15 minutes to clean the internal pipework.

Drain Down: A pump is used to drain down your hot tub.

Jet Wash, Wet Vac and Clean: The hot tub cover, body, shell and surrounds are jet washed. A degreaser is used to scrub the shell and a wet vacuum removes the remaining water and debris.

Shell Polish: The hot tub shell is wiped down with a surface cleaner and polish.

Cartridge Clean: The filters are degreased and left to soak.

Re-Fill: A hose then begins the re-fill.

Electrical Check: Dead tests are carried out on the electrical components, this identifies any potential faults.

Leak Check: All gaskets and valves are checked for leaks.

Cover Clean: The cover is scrubbed with surface cleaner and rinsed, then fabric protector is applied.

Commissioning: Once re-filled, the hot tub is turned back on and chemically balanced.

Running Checks: Electrical components are run tested and pipework is checked for leaks. The heater, pressure switches and probes are all run tested.

Controls: Controls are re-programmed if required.

Cartridge Filters: After a long soak, they are jet washed and re-installed.

Handover: If required, customers are advised of how to balance the hot tub and how to properly maintain.

Chemicals: All relevant chemicals and testing equipment are available to purchase from stock in our vans.
